PROFILE Full Stack Developer with 5+ years of experience building and scaling web applications. I have experience working with MERN stack (MongoDB, Express.js, React.js, Node.js) and Ruby on Rails. Strong background in developing RESTful and GraphQL APIs, optimizing database performance, and ensuring seamless frontend-backend integration. Experienced in deploying and managing applications on AWS with Docker and CI/CD pipelines. Adept at working in Agile environments, writing clean and maintainable code.

SKILLS

Front-End: React.js, Next.js, JavaScript, TypeScript, HTML5, CSS3, Tailwind CSS, AJAX

Back-End: Node.js, Express.js, ROR, RESTful APIs, GraphQL, Microservices Architecture, WebSockets, JWT / OAuth

Databases: PostgreSQL, MySQL, Redis, SQLite, Elasticsearch

Cloud & DevOps: AWS (EC2, S3, Lambda, EKS), Docker, Kubernetes, Jenkins, GitLab CI/CD, CircleCI, Sidekiq, RabbitMQ

Testing: RSpec, Capybara, FactoryBot, Jest, React Testing Library, Playwright

Tools & Monitoring: Git, GitHub, Heroku, New Relic, Datadog

Others: Agile, Performance Optimization, Cross-Functional Collaboration, Experience with International Clients

WORK EXPERIENCE

November 2025 - Present
Remote

Senior Software Engineer, Independent Contractor

- Developed and maintained full-stack web application using React.js, Next.js, Node.js, and Express.js for a U.S.-based client.
- Collaborated directly with stakeholders to gather requirements and translate business needs into scalable technical solutions.
- Built new features, resolved production issues, and enhanced existing functionality while maintaining high code quality.
- Integrated third-party services and APIs, including OCR-based document processing, to automate business workflows.
- Participated in code reviews, GitHub-based development, and AWS-hosted deployments to ensure reliable production releases.
- Collaborated with cross-functional teams to deliver scalable, production-ready features.
- Integrated AI-assisted development workflows to accelerate feature delivery by breaking down complex requirements into structured prompts, generating initial implementations, and refining AI-generated code to production quality.

Aug 2022 - October 2025
Lahore, Pakistan

Senior Software Engineer, Devsinc

- Built and architected reliable APIs and backend services using Node.js and Express.js, integrating scalable systems to ensure application reliability and high performance.
- Developed and optimized RESTful and GraphQL APIs, improving response times by up to 40%.
- Integrated third-party services including Stripe, Firebase, Google Analytics, and payment gateways, enabling core business workflows.
- Modernized frontend modules using React.js, Next.js, and Tailwind CSS, improving accessibility and responsiveness.
- Led performance optimization initiatives (refactoring, database tuning, caching) achieving 30% system performance gains.
- Deployed, monitored, and debugged applications using AWS, New Relic, Datadog, improving observability and incident response.
- Guided Rails/Ruby and Node.js version upgrades, ensuring stability and long-term maintainability.
- Mentored junior developers and led technical onboarding.

May 2021 - July 2022
Lahore, Pakistan

Software Engineer, Blackstack Software Solutions

- Developed backend functionality using Ruby on Rails for a peer-review management system supporting scientific workshops.
- Designed automated workflows for proposal submissions, review cycles, scoring, and approvals, improving operational efficiency by 25%.
- Implemented PDF generation using LaTeX, Puppeteer, and jsPDF for standardized, print-ready research documents.
- Collaborated closely with frontend and product teams to ensure correctness in reviewer allocation and scoring logic.
- Followed Agile practices, writing clean, modular, and maintainable code.

PROJECTS

Vehicle Titling Platform

Technologies: React.js, Next.js, TypeScript, Node.js, Express.js, MongoDB, Redis, AWS (EC2, S3, Lambda), OCR, REST APIs

- Built real-time dashboards that enabled clients to monitor vehicle titling workflows and track processing status.
- Developed advanced search, filtering, and reporting features, reducing manual tracking and improving operational visibility.
- Integrated an OCR solution to extract and validate data from state-issued vehicle documents, automating document verification.
- Developed REST APIs and backend services to support workflow automation and secure data processing.
- Optimized backend performance using efficient database queries and Redis caching.

BarqFleet

Technologies: Node.js (Express), React.js, MongoDB, PostgreSQL, Google Maps API, Redis, BullMQ, AWS (EC2, S3, Lambda), Docker

- Built a full-stack logistics management platform enabling real-time tracking of riders, routes, and orders.
- Implemented Node.js-based RESTful and GraphQL APIs with JWT/OAuth authentication.
- Integrated Google Maps API for live geolocation, routing, and rider tracking, improving operational accuracy by 35%.
- Designed background job processing using BullMQ and Redis for notifications and async workflows.
- Developed interactive dashboards using React, Redux Toolkit, and Axios, ensuring smooth state management.
- Deployed and scaled the platform on AWS using Docker and CI/CD pipelines.

Agzaga

Technologies: Ruby on Rails, React.js, PostgreSQL, Elasticsearch, Google Pay, Fabric, CDN, AWS

- Contributed to a B2B marketplace enabling farmers to list, browse, and purchase agricultural products.
 - Built RESTful APIs in Ruby on Rails to manage products, orders, payments, and user workflows.
 - Designed responsive, user-friendly interfaces using React and Bootstrap.
 - Integrated secure payment gateways (Google Pay, Fabric) to support seamless transactions.
 - Implemented Elasticsearch-based search, enabling fast filtering by keywords, categories, and pricing.
 - Optimized frontend performance via code splitting, lazy loading, and CDN delivery, reducing page load time by 25%.
-

EDUCATION

2017 - 2021

Bachelors of Software Engineering, Punjab University College of Information Technology (PUCIT)
